

1.a) What are the different types of CSS?

A: i) Inline CSS: Inline CSS contains the CSS property in the body section attached with element is known as inline CSS.

ii) Internal CSS: This can be used when a single HTML document must be styled uniquely. The CSS rule set should be within the HTML file in the head section.

iii) External CSS: External CSS contains separate CSS file which contains only style property with the help of tag attributes. CSS extension should be linked to the HTML document.
